

**Ahrens**

## Ahrens Design & Construction

At Ahrens, our Design & Construction business offers clients a one-stop shop from concept to completion. By keeping control of the entire design and construction process we are able to better control costs, stock and quality. This enables us to consistently deliver outstanding projects on time and on budget.

- Key advantages of our vertically integrated set-up include:
- managing design, shop detailing and engineering services;
  - a world-class steel fabrication facility;
  - access to our own multi-skilled site erection crews;
  - solid relationships with experienced sub-contractors;
  - our own hands-on project management team.

At Ahrens, we have been able to extend our project base as a result of our commitment to local representation in key markets and the ability to work in remote areas.

These advantages continue to benefit clients throughout Australia.

# Ahrens Materials Handling

Ahrens is rapidly becoming one of Australia's leading suppliers of Materials Handling facilities.

By utilising its internal design and construction services, as well as silos from M&S and other equipment from Sherwell, it has completed some of the largest and most modern feedmills, storage buildings and commodity sheds in Australia.

The Famson range complements the Materials Handling division by offering expertise with the design and construction of belt conveyors, bunker storage, drive-over hopper stackers and bucket elevators.

Other industry alliances with equipment suppliers means Ahrens is a true one-stop shop for Materials Handling projects.

**Price** At Ahrens, we are able to offer our clients the best price, by increasing productivity and reducing administration costs.

## Quality

From concept, through construction, to final fit-out we are able to maintain tight control over all aspects of our projects, ensuring we deliver projects of consistently outstanding quality.

## Time

Our vertically integrated approach, allows us tight control over stock and program delivery to ensure our projects are completed within required timeframes and up to 20% faster than the traditional client-architect-engineer-builder process.
